

Name	reversePayment																						
Specification	This API is used to reverse payment done for a specific merchant, the inputs are the token, MTN transaction ID, and the merchant transactions ID. The system determines the amount to be taken from the merchant account and transferred to the customer and does the reverse																						
Resource URL	https://services.mtnsyr.com:2021/reversePayment																						
CURL	<pre>curl --location -- request POST 'https://services.mtnsyr.com:2021/reversePayment ' \ --header 'Content-Type: application/x-www-form-urlencoded' \ --data- urlencode 'inputObj={"token":"","mtnTrxId":"","BpartyTransacti onID":""}'</pre>																						
Method	POST																						
Input	<table border="1"> <thead> <tr> <th colspan="2">JSON Object (inputObj)</th></tr> </thead> <tbody> <tr> <td>token</td><td>String (Required)</td></tr> <tr> <td>mtnTrxId</td><td>String (Required)</td></tr> <tr> <td>BpartyTransactionID</td><td>String (Required)</td></tr> </tbody> </table>	JSON Object (inputObj)		token	String (Required)	mtnTrxId	String (Required)	BpartyTransactionID	String (Required)														
JSON Object (inputObj)																							
token	String (Required)																						
mtnTrxId	String (Required)																						
BpartyTransactionID	String (Required)																						
Output (in case of success)	<table border="1"> <thead> <tr> <th colspan="2">JSON Object</th></tr> </thead> <tbody> <tr> <td>result</td><td>True</td></tr> <tr> <td>error</td><td>""</td></tr> <tr> <td>data (JSON OBJECT)</td><td>{"transactionId":""}</td></tr> </tbody> </table>	JSON Object		result	True	error	""	data (JSON OBJECT)	{"transactionId":""}														
JSON Object																							
result	True																						
error	""																						
data (JSON OBJECT)	{"transactionId":""}																						
Output (in case of failure)	<table border="1"> <thead> <tr> <th colspan="2">JSON Object</th></tr> </thead> <tbody> <tr> <td>result</td><td>False</td></tr> <tr> <td>error</td><td>Error Code</td></tr> <tr> <td>errorDesc</td><td></td></tr> <tr> <td>data</td><td>""</td></tr> </tbody> </table> <table border="1"> <thead> <tr> <th>Error Code</th><th>Error Description</th></tr> </thead> <tbody> <tr> <td>60000</td><td>Other Error</td></tr> <tr> <td>60003</td><td>Invalid token</td></tr> <tr> <td>60015</td><td>The sender GSM and receiver GSM are the same</td></tr> <tr> <td>60008</td><td>sender GSM balance is less than transaction amount balance</td></tr> <tr> <td>60010</td><td>The transaction Amount is over the payment transaction limit</td></tr> </tbody> </table>	JSON Object		result	False	error	Error Code	errorDesc		data	""	Error Code	Error Description	60000	Other Error	60003	Invalid token	60015	The sender GSM and receiver GSM are the same	60008	sender GSM balance is less than transaction amount balance	60010	The transaction Amount is over the payment transaction limit
JSON Object																							
result	False																						
error	Error Code																						
errorDesc																							
data	""																						
Error Code	Error Description																						
60000	Other Error																						
60003	Invalid token																						
60015	The sender GSM and receiver GSM are the same																						
60008	sender GSM balance is less than transaction amount balance																						
60010	The transaction Amount is over the payment transaction limit																						

		60011	cannot get the transaction Amount from sender GSM
		60112	cannot refund the transaction Amount to sender GSM
		60012	cannot transfer the transaction Amount to receiver GSM
		60017	error while checking balance
		60019	Entered data doesn't match stored data
		60017	Merchant not eligible for refund
